

LED description:
LED1 (GREEN) - LP5907 working;

You can replace the linear regulator LP5907MFX-3.3 with any other linear regulator in the SOT-23-5 package, with the same pinout and capable of operating at +5 V (standard USB port voltage).

The Bias Tee TCBT-14 + module can be replaced with a capacitor (BT) and inductor L(BT). If you want to use this solution, select the appropriate PCB:
Coax power supply, fixed voltage (SMD, ENCLOSURE): Main module
L(BT) = 100 uH, SMD 0805;
C(BT) = 100 nF, SMD 0805;
