

Revision 2 of the Butterworth Bandpass Filter has reduce attenuation at the frequency 125 - 140 MHz and increases attenuation at the frequency 195 + MHz as compared to revision 1. If you want to use revision 2 instead revision 1, you should use following components:
C19 = 18p, C20 = 8.2p, C21 = 68p, C22 = 4.7p, C23 = 68p, C24 = 8.2p, C25 = 18p;
L7 = 56n, L8 = 120n, L9 = 15n, L10 = 220n, L11 = 15n, L12 = 120n, L13 = 56n;
Graph of the filters characteristics are located on the project page.
